

### Dunk Tank Information & Rules

We require a water source and hose to fill the tank. The dunk tank hold 325 gallons of water and takes approximately 1 hour to fill. The dunk tank is affixed to a trailer so it is ideal to drive it in to position. If not, as close as we can to where water source is located. We cannot climb up or down stairs, uphill, downhill, go through walkways, regular doorways or small gates. If a mid-size vehicle will not fit, either will the dunk tank. We will not set up indoors. The tank cannot be moved once filled. The water is drained out on to the ground from a large valve on the tank at a rapid speed, thus soaking the area and what's around. When setting up stay clear of vehicles and windows!
